PROFILE

Financial Engineer focused on **financial analysis, credit risk, and quantitative finance**, complemented by **data science and machine learning**. Experienced in analyzing the financial statements of public companies and in developing applied, data-driven models. Interested in roles where I can apply analytical tools to solve real-world problems.

WORK EXPERIENCE

Financial Analyst

World Vest Base

May 2026 – July 2026

- Comprehensive evaluation of public companies, including the analysis of their financial statements and of the qualitative factors that drive their performance.
- Structuring and cleaning of corporate information, ensuring the integrity and accuracy of the institutional database.
- Generation of analytical reports on each company's situation, providing strategic insights that support investment decisions.

PROJECTS

Mean-Reverting Portfolio

PAP – Professional Application Project

- Construction of portfolios using groups of assets whose prices tend to move together and revert to an equilibrium value.
- Definition of buy and sell rules and validation of the strategy on historical data across different market periods.
- **Result:** low-risk investment alternative with ~**8.8% annual return**, a Sharpe of **1.18**, and a maximum drawdown of 18%.

Credit Risk Model

Academic and personal project

- Development of models to classify clients by their default risk, including data preparation and selection of relevant variables.
- **Result:** interpretable score with ~**78% accuracy** and **ROC-AUC of 0.75** on test data, well calibrated against the actual default rate.

Corporate Credit Valuation

Academic project presented at Citi Banamex

- Analysis of a publicly traded company using financial indicators and benchmarking against peers in the same sector.
- **Result:** credit recommendation with proposed financing terms, presented to Citi Banamex.

Computer Vision System

- End-to-end development of an object classification system using **convolutional neural networks (CNN)** (3 or more classes), ingesting a custom dataset of ~4,000 images with real-time detection.
- **Result:** accuracy of approximately **92%**, with solid and consistent results.

EDUCATION

Financial Engineering

ITESO Universidad Jesuita de Guadalajara

2022 – 2026

- **GPA: 95.0 / 100.**
- Relevant areas: quantitative finance, credit risk, econometrics, and data analysis.

SKILLS

Languages: Python, SQL, MATLAB, TypeScript, HTML, CSS

Tools: Excel (advanced), React, Docker, Power BI, Git, GitHub, Linux, Terminal (CLI)

Libraries: Pandas, NumPy, Matplotlib, Seaborn, SciPy, Statsmodels, Scikit-learn, TensorFlow, yfinance

Applied AI: Claude Code, Codex, and AI integration into the workflow

AREAS OF EXPERTISE

- Financial analysis
- Credit risk
- Data analysis
- Quantitative finance
- Applied machine learning

LANGUAGES

Spanish: Native

English: Fluent
